

YEKTA DEMIRCI

+905321386958 | Istanbul, Turkiye | business@yektademirci.com | www.yektademirci.com | <https://www.linkedin.com/in/yekta-demirci/>

SUMMARY

As a multi-disciplinary game-development enthusiast, I leverage my expertise in programming, design, and QA to craft production-ready design documents and add value to any organization. With the education and skills I've acquired, I am confident in my ability to deliver actionable insights to the team.

EXPERIENCE

Garage Atlas

Apr 2026 - ongoing

Technical Artist & Design

- **Designed** and **simulated** high-fidelity **digital garments** within **Marvelous Designer**, utilizing advanced pattern creation and *draping techniques* to fit custom character models, while **optimizing** mesh outputs for clean retopology and efficient deformation pipelines.
- Utilized "Agisoft Metashape" and "RealityCapture" to process **high-fidelity photogrammetry scans** of human subjects, performing extensive 3D scan cleanup, topology optimization, and mesh preparation for production-ready character assets.
- Developed a custom **Houdini tool (RepoTool)** to automate the process of wrapping and conforming **AI-generated** or **handcrafted high-poly** character figures into MetaHuman standards or custom target topologies, effectively eliminating manual retopology workflows.
- **Engineered level-wide performance optimization in UE5**, driving draw calls down from ~3,500 to 700: Re-architected environment assets into Hierarchical Instanced Static Meshes (**HISM**) and **Packed Level Actors** using advanced workflows like the **Harvest Instances tool** and **dynamic Blueprint-based grid spawning systems**.
- **Optimized rendering pipelines and global illumination**: Utilized "r.LumenScene.Radiosity.VisualizeProbes" to diagnose and rectify faulty Lumen probes, while **implementing Per-Instance Custom Data** within the material editor to drive dynamic visual variations (e.g., color and hue randomization) across thousands of instances under a single, optimized draw call.

PROJECTS

Leviathan Axe-Inspired Weapon Prototype | Unreal Engine 5 - <https://tinyurl.com/2vhkrkmm>

April - 2025

Bahcesehir University

- Created a Leviathan Axe-inspired weapon prototype in Unreal Engine 5.
- Implemented throw, recall, and hit feedback mechanics.
- Focused on gameplay feel, timing, and player feedback.

Personal Portfolio & Design Showcase Site - www.yektademirci.com (ongoing)

Mar 2026

Bahcesehir University

- Designed and developed a multi-disciplinary portfolio to centralize game design, technical workflows, and research projects.
- Structured complex data—ranging from financial roadmaps to cognitive UX analyses—into a seamless, user-centered navigation flow.
- Integrated multimedia elements (trailers, motion graphics) and technical documentation to provide a holistic view of the game development pipeline.

SKILLS

- **Engines & Tools:** Unreal Engine 5, Houdini, Marvelous Designer, Blender, Zbrush, Agisoft Metashape, RealityCapture
- **Design:** Systems Design, UX Research (Neuroscience-based), Level Design, Rapid Prototyping.
- **Production:** Project Management (Notion), Strategic Planning, Market Data Analysis.
- **Media:** Video Editing (Adobe Premiere/After Effects), Motion Graphics, Visual Storytelling.

EDUCATION

Bachelor of Arts in Digital Game Design

Oct 2022 - Aug 2027 (ongoing)

- **3.45 GPA**

Minor in Video Production

Bahcesehir University
